

COVERGOLD

Windows based operating software package. Easy to use compose and display messages, on all connected display systems.

VueWare package includes the following components:

VueEdit: Editing, scheduling and system management software. VueEdit is installed on the user's computer. There can be many VueEdit installations in one system, allowing several users to compose and send messages to multiple display units in the system.

VueControl: Display control software. VueControl is pre-installed on each display unit, and runs automatically when the unit is turned on.

VueDB: The system database. VueDB is installed on one PC in the system, which is linked to the user's computer and to the display units through the network. VueDB holds the system information and all the messages composed by the users.

VueWare package features:

- Compose messages with Microsoft Word and PowerPoint.
- Enhance your messages with Images, Animations, Videos and HTML.
- Multiple screen display units to show large amount of information simultaneously.
- Easy and intuitive message scheduling.
- Full network capability.
- Control many display units in one system.
- Numerous users in one system.
- Powerful management and administration tools.
